

THE COMPANY

Since 1979 we have specialised in **shearing and deep drawing of sheet metal** upon customer's drawings, using **automatic and manual presses from 25 to 400 tonnes**.

We offer finished components, starting with the **design and manufacture of the dies** and ending with **heat and surface treatments** on the finished product.

We are also equipped to carry out any kind of **assembly** (mechanical, automatic, robotised and manual) using automatic machines, designed and manufactured in-house.

The **tools and dies** required for the production of the items are **entirely designed and manufactured in-house** by our Technical Department and Tooling Department.

The use of **advanced management software** allows us to monitor the entire production cycle, including the testing of incoming material and parts in production, thanks to the **real-time connection** between machines and MRP.

We believe in innovation, and we invest in **industrial research and development**, also obtaining regional and national contributions for the innovation of production processes. As a result of these projects, fruitful collaborations have been established with the **Universities** of Bologna, Modena and the Polytechnic of Milan.

TARGET SECTORS

- *Agricultural Machines*
- *Automation and Robotics*
- *Automotive*
- *Building Construction*
- *Camper manufacturing*
- *Electromechanics*
- *Electronics*
- *Hydraulics*
- *Motorcycle manufacturing*
- *Oleodynamics*

We can provide **qualified references** from **Italian and International** enterprises leaders in these fields.

COMPETITIVE ADVANTAGES

- **Ordinary and extraordinary dies maintenance** free of charge and guaranteed for life
- **Designing** and development of innovative and customised technical solutions based on customer drawings
- **Industry 4.0** – digitisation of business processes for automatic management of orders, production and maintenance processes
- **Real-time connection** between machines and MRP planning system to reduce human error
- **Integrated traceability** – raw material, production stages, treatments, finished product
- Management capacities that allow us to perform the role of **main subcontractor**
- **Open order management** with customised delivery planning according to customer needs
- **Fast and frequent deliveries**
- **Systematic testing** of products at every stage of the production process with a drastic reduction in non compliances
- **Test certificates** on request
- **Transparency** – availability of videos, presentations, audits in presence and online in several languages
- Active contribution to the **development of the social and economical policy** of the Emilia Romagna Region
- Collaboration with universities for the development and transfer of **technical know-how** to new generations
- Members of the **CAMSER consortium** – network of mechanical companies for the improvement of marketing strategies in order to achieve lower costs and, in this way, advantages for customers
- **English and German** speaking staff
